

Welcome!

Before we begin...

Today's session will be recorded

Please add your name and organization in the chat

Thursday, February 22, 2024 • 12:00 - 1:15 PM MST

Improving Colorectal Cancer Screening Rates in AZ – The Community Health Worker's Role ECHO

Session 2: CRC 101, Part 2: Prevention and Early Detection

Welcome to Session 2 of the

Improving CRC Screening Rates in AZ – The CHW's Role ECHO

Each ECHO session will be recorded and *may* be posted to a publicly-facing website

You will be muted with your video turned off when you join the call. Use the buttons in the *black* menu bar to unmute your line and to turn on your video. **If you do not wish to have your image recorded, please turn <u>OFF</u> the video option.**

Today's materials will be made available on our ACS ECHO website.

Please type your full name, the full name of your organization, and e-mail in the chat box

This ECHO session takes place on Zoom through UNM's iECHO platform. To review Zoom's privacy policy, please visit zoom.us/privacy

Questions about Zoom? Type in the chat box @Allison Rosen or @Beth Graham

Didactic: Colorectal Cancer (CRC) 101 Part 2 Prevention and Early Detection

Conflict of Interest

Disclaimer
 I have no personal or professional actual or potential conflict of interest in relation to this educational presentation.

Learning objectives

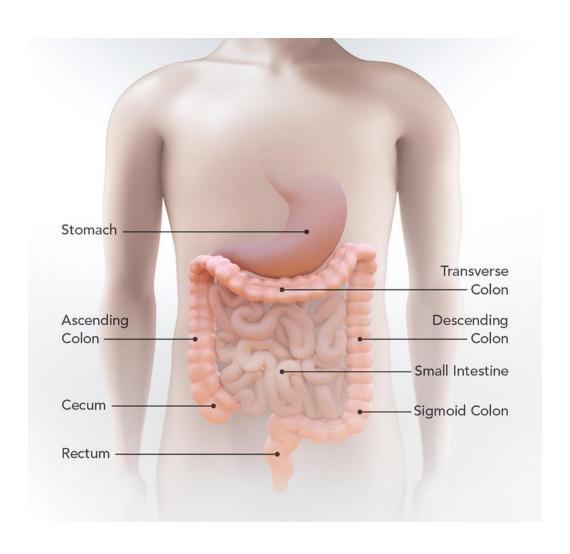

1. Describe Colorectal Cancer (CRC)

- 2. Describe ways to prevent CRC
- 3. Describe ways to detect CRC

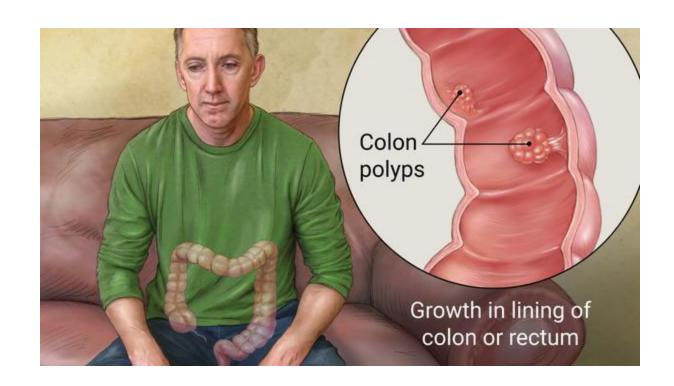

Have a question? Don't wait to ask! Feel free to enter in the Chat at any time.

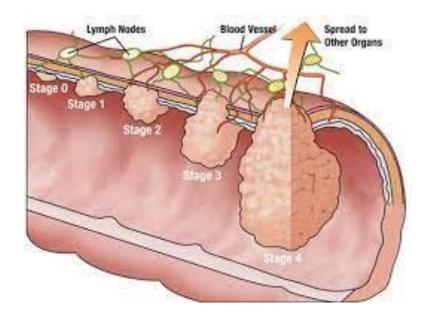

Anatomy of the gastrointestinal (GI) track

What is Colorectal Cancer (CRC)

 A disease where abnormal growths in the colon or rectum called polyps may grow out of control and become cancerous.

Prevention of Colorectal Cancer (CRC)

Screening: Most effective way to lower risk of CRC starting at age 45

Healthy Diet:

- Low in animal fats
- · High in fruits and vegetables
- · High in whole grains

Healthy lifestyle choices:

- Physical activity
- Limit alcohol and tobacco
- Optimal sleep
- Healthy weight
- Stress reduction

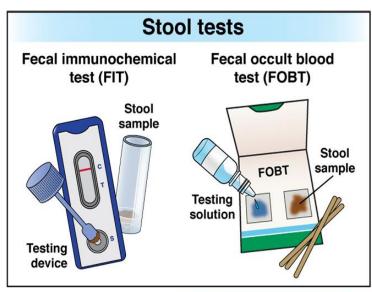

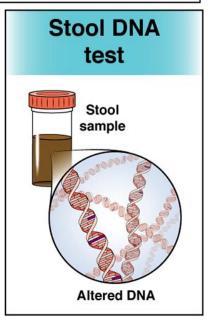

Detection of CRC – Screening Tests

Stool Tests: Colorectal polyps and cancers can bleed. Stool tests check for tiny amounts of blood in feces (stool).

- gFOBT (guaiac fecal occult blood test)
- **FIT** (fecal immunochemical test), also known as **iFOBT** (immunochemical fecal occult blood test)

• **FIT-DNA** (also referred to as the stool DNA test) combines the FIT with a test that detects altered DNA in the stool

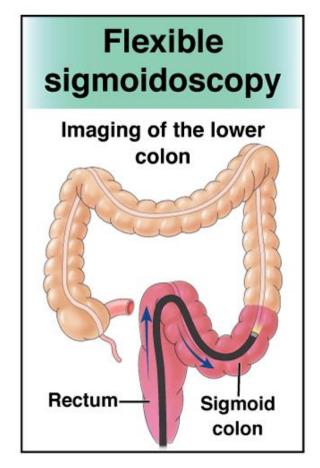

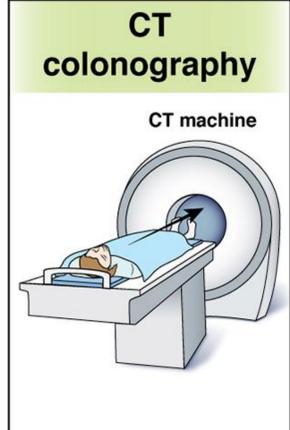

Detection of CRC – Screening Tests

Sigmoidoscopy: The rectum and sigmoid colon are examined using a sigmoidoscope, a flexible lighted tube with a lens.

Colonoscopy. The rectum and entire colon are examined using a colonoscope, a flexible lighted tube with a lens for viewing and a tool for removing tissue.

Virtual colonoscopy: Called computed tomographic (CT) colonography, is a screening method that uses a CT scanner to produce a series of pictures of the colon and the rectum from outside the body.

Selection of a Screening Method

- An individual's decision about which test to have may depend on:
- The person's age, medical and family history, and general health
- Potential harms of the test
- The preparation required for the test
- Whether sedation may be needed for the test
- The follow-up care needed after the test
- The convenience of the test
- The cost of the test and the availability of insurance coverage

Open Discussion: Questions & Answers

Rosi M Vogel, CHC, CCHW
Mel & Enid Zuckerman College of Public Health University of Arizona, Health Promotion Sciences

Session 2 Scenario Presentation

Session 2 Scenario

Screening Event Findings:

Focus Group in Nogales, AZ of people with Pre-Diabetes or Type 2 Diabetes

Audience

- 7 women
- Average age: 68 (Min 58 & Max
 88)
- 6 women had already had a colonoscopy
- Two women had history of CRC in their family

Barriers/Challenges

Overall lack of education, awareness, and information.

- Event schedule conflict
- Fear or embarrassment, pain
- Don't want to know
- Lack of knowledge about prevention, signs and symptoms, testing process, and the increased risk for people with pre or type 2 diabetes.
- The COVID-19 pandemic caused a reduction in cancer screenings

Lessons Learned

- People are eager to learn about CRC screening
- Must promote early screening!
- Increased mortality rates in the Hispanic population
- Increased risk of CRC in people with type 2 diabetes
- Diabetes also increases the risk of cancer-related-mortality
- The benefit of 1:1 CRC education and promotion
- #1 no Provider recommendation!

Session 2 Scenario

Provided by: Rosi M. Vogel, CHC, CCHW

Screening Event Findings:

Focus Group in Nogales, AZ of people with Pre-Diabetes or Type 2 Diabetes

Discussion & Question

- 1) How can we communicate the benefits of screening and early detection in the Hispanic community?
- 2) Do we think men are less likely to talk about CRC screening?
- 3) Do we know if people are worried about the cost of screening?
- 4) Do patients know about the different tests?
- 5) Are they afraid of the results?

Lessons Learned

- People are eager to learn about CRC screening
- Must promote early screening!
- Increased mortality rates in the Hispanic population
- Increased risk of CRC in people with type 2 diabetes
- Diabetes also increases the risk of cancer-related-mortality
- The benefit of 1:1 CRC education and promotion
- #1 no Provider recommendation!

What's Next?

ECHO Participation Post-Session Survey

Post-Session 2 Survey

How to Use a QR Code

- 1. **Turn on** your phone camera
- 2. Aim the camera at the code
- 3. A link will show up
- 4. **Tap** the link to go to the survey

Reminders

Slides, Recordings, and Resources will be made available within one week. All resources will be available on the <u>ACS ECHO Website</u>.

Do you have **Session 3** on your calendar?

March 21, 2024

12:00-1:15 PM MST

Topic: CRC Screening Modalities

Didactic Presenter: Patty Molina, MPHSenior Director of Community Health Services
